

OSM (OpenStreetMap)

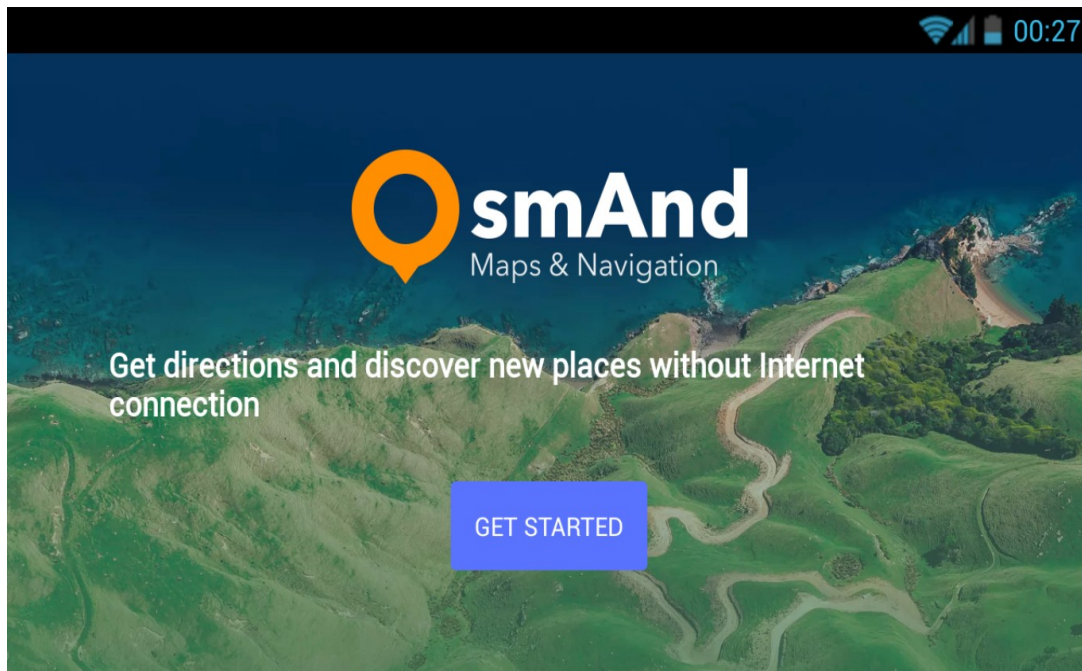

The project that creates and distribute free geographic data for the world. We started using it because most maps you think of as free actually have legal or technical restrictions on their use, holding back people from using them in creative, productive, or unexpected ways.

Procedure for download maps(osm) for android

Go to playstore and type OsmAnd

When you launch OsmAnd for the first time, all the parameters will be set to default settings. You can configure them by changing features in the menu. As you launch the app, you'll see the map screen with the main menu button. You can also switch to view dashboard on start. A dashboard is a starting screen with different cards containing information about different groups of settings or files. The dashboard shows your Favourites (favourite places), your GPX tracks list, the plugins information, etc.

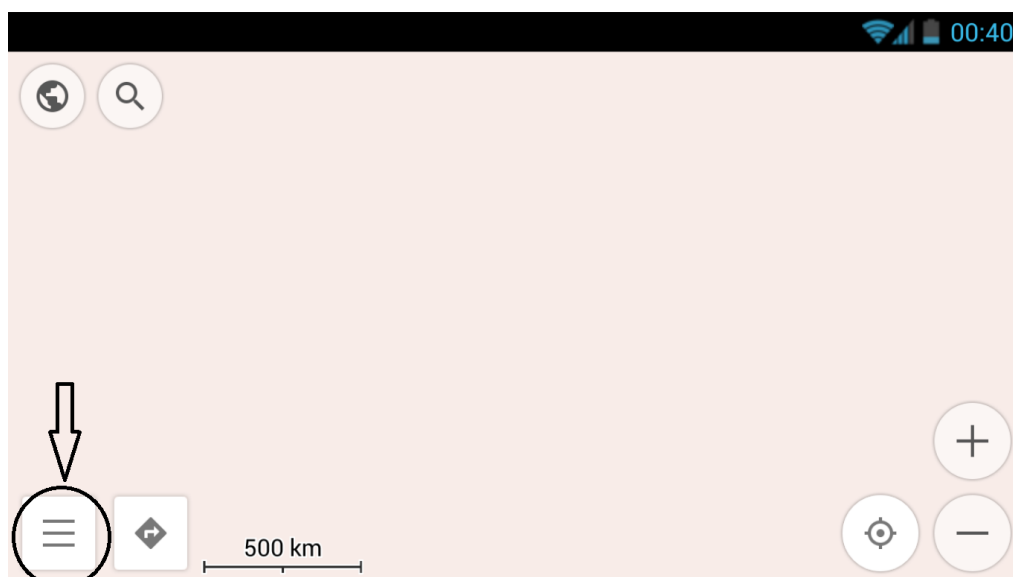

OsmAnd Trip recording plugin

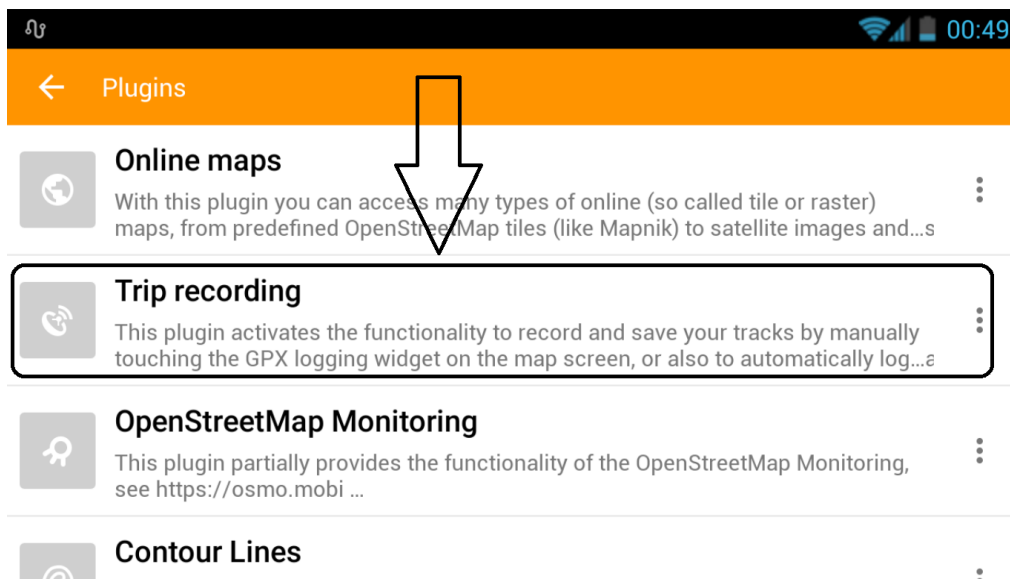

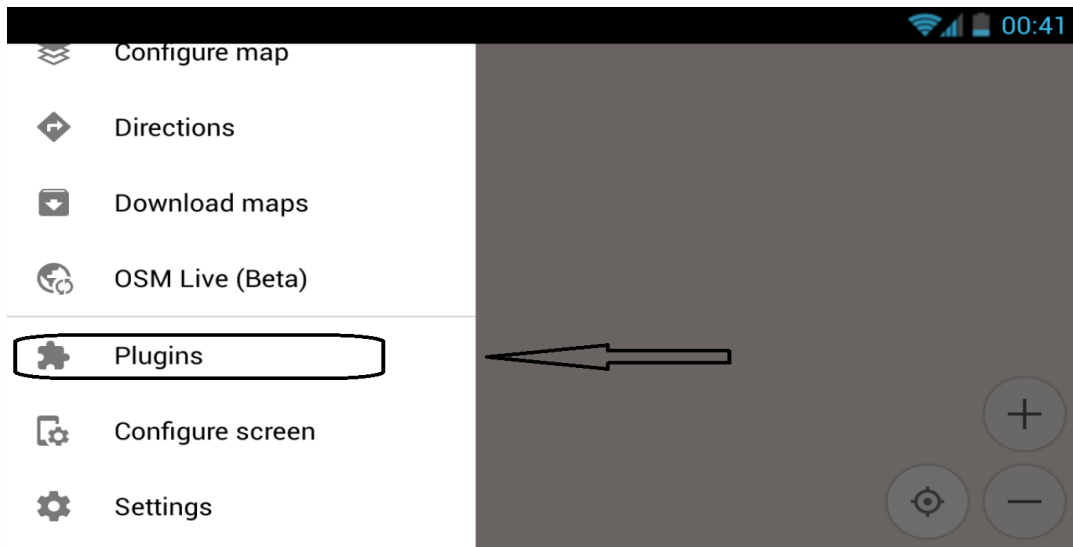

It allows you to record your movement using your phone's GPS (and through other networks optionally). If you are going for a run, need to see your entire route after a walk around the city or measure the distance you covered, the plugin will help you.

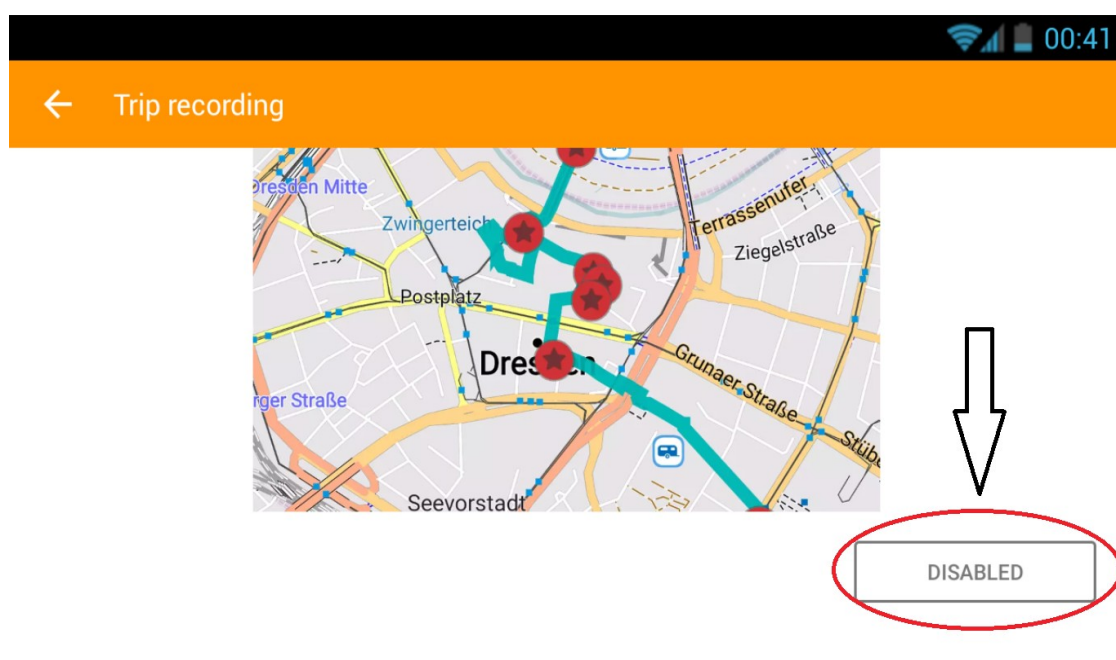

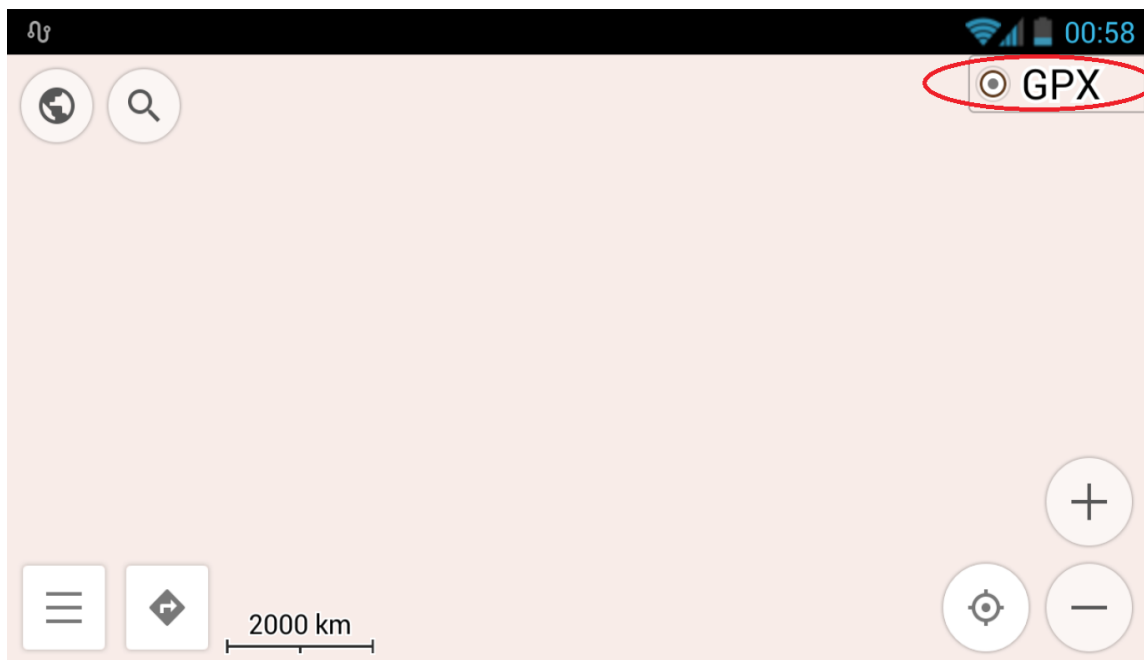

Default plugins are disabled we need to enable them to use.

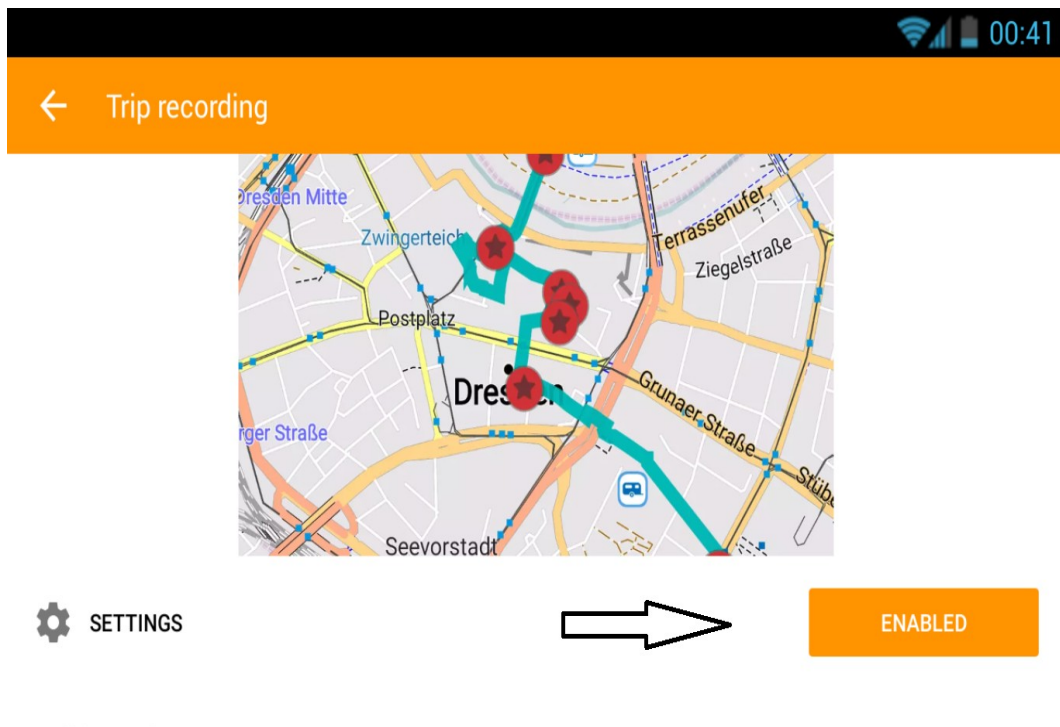

How to use it for android

- You have to enter the Plugins menu, then select **Trip recording** and tap **Enable**.

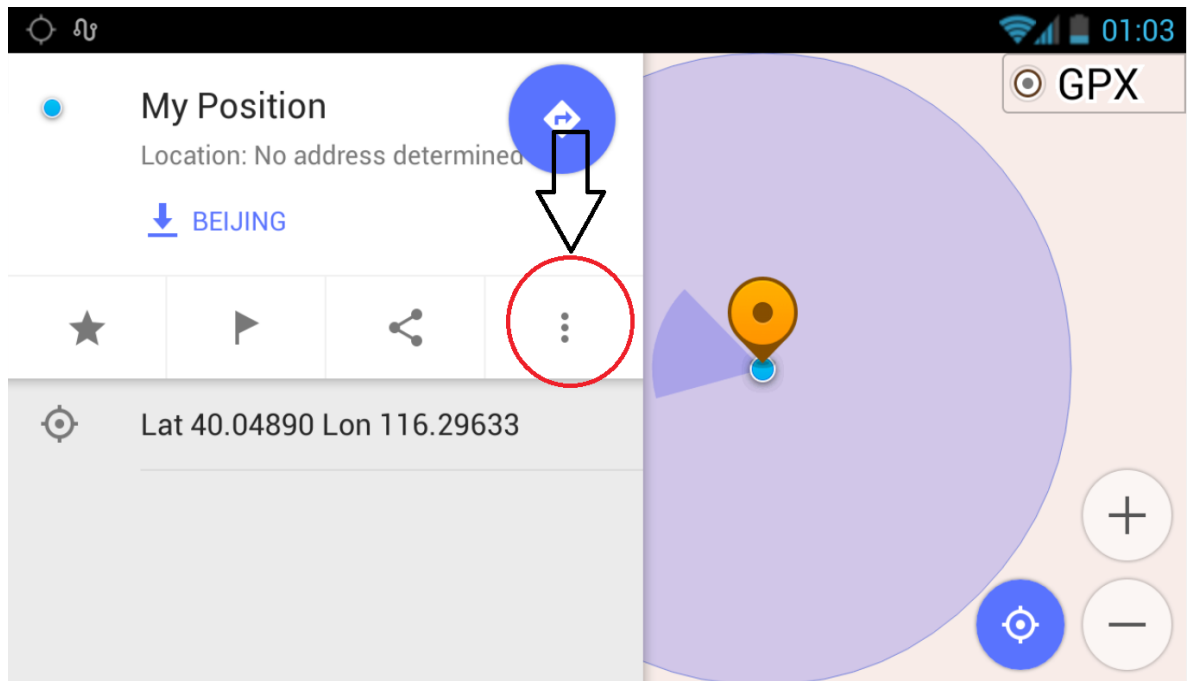

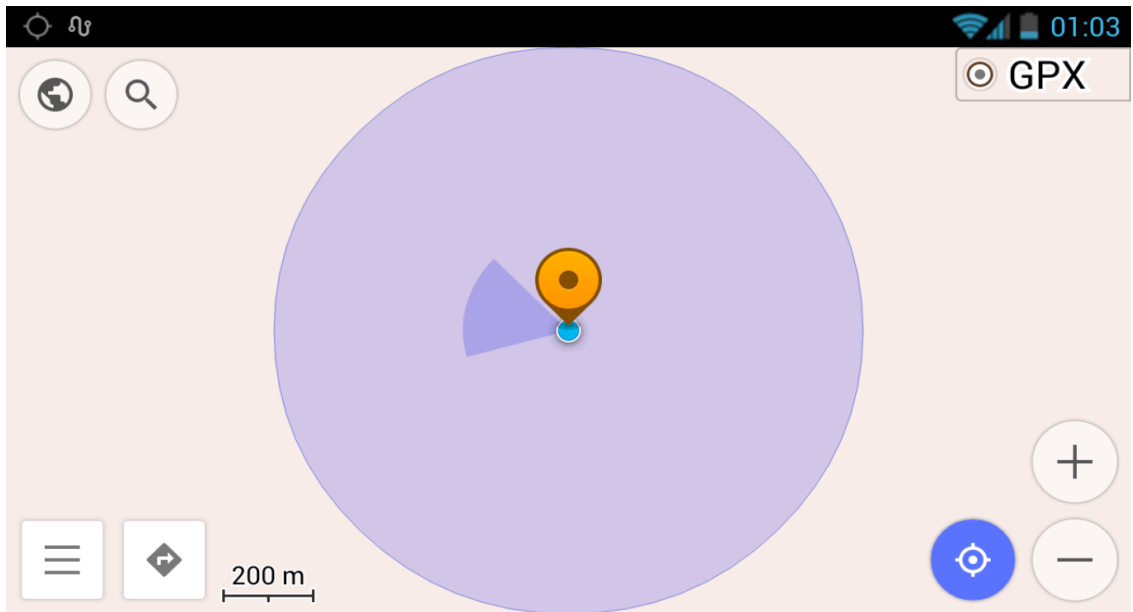

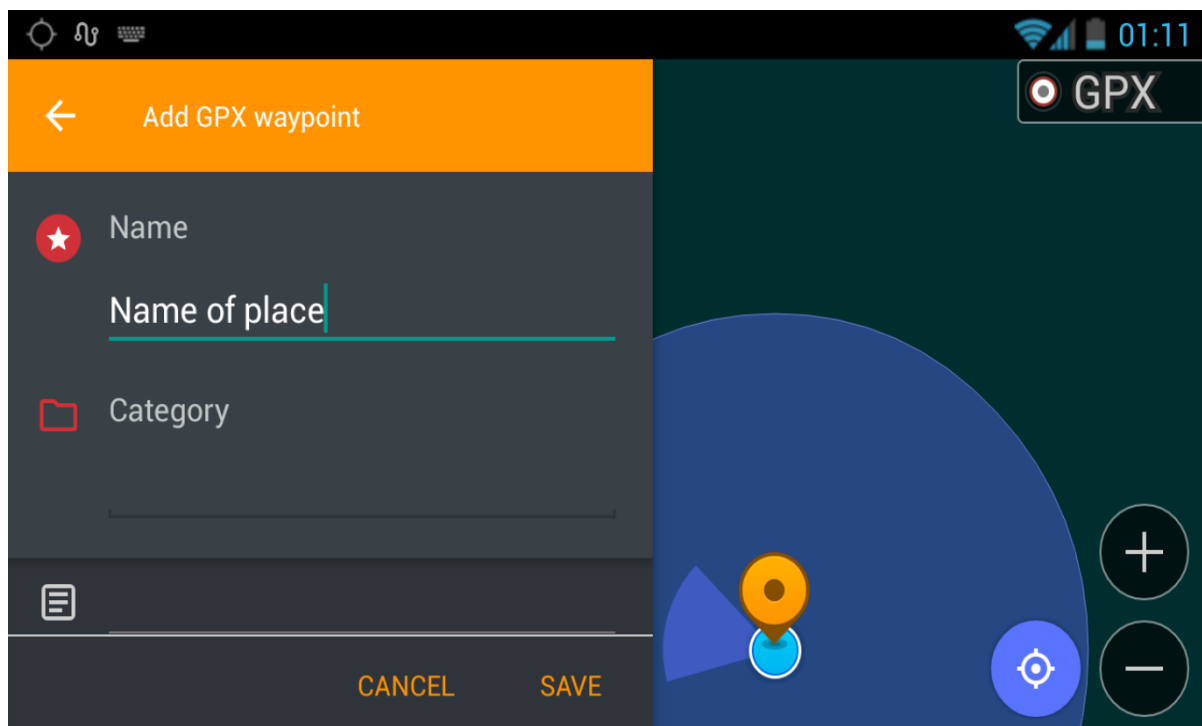

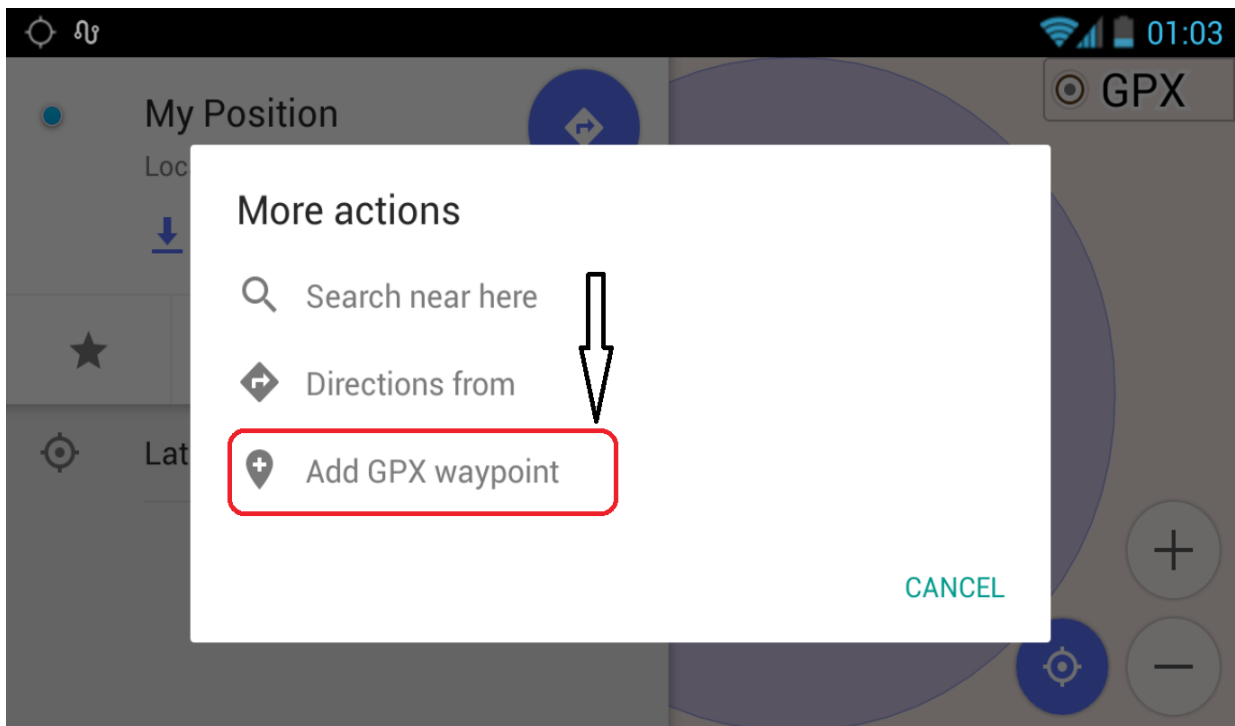

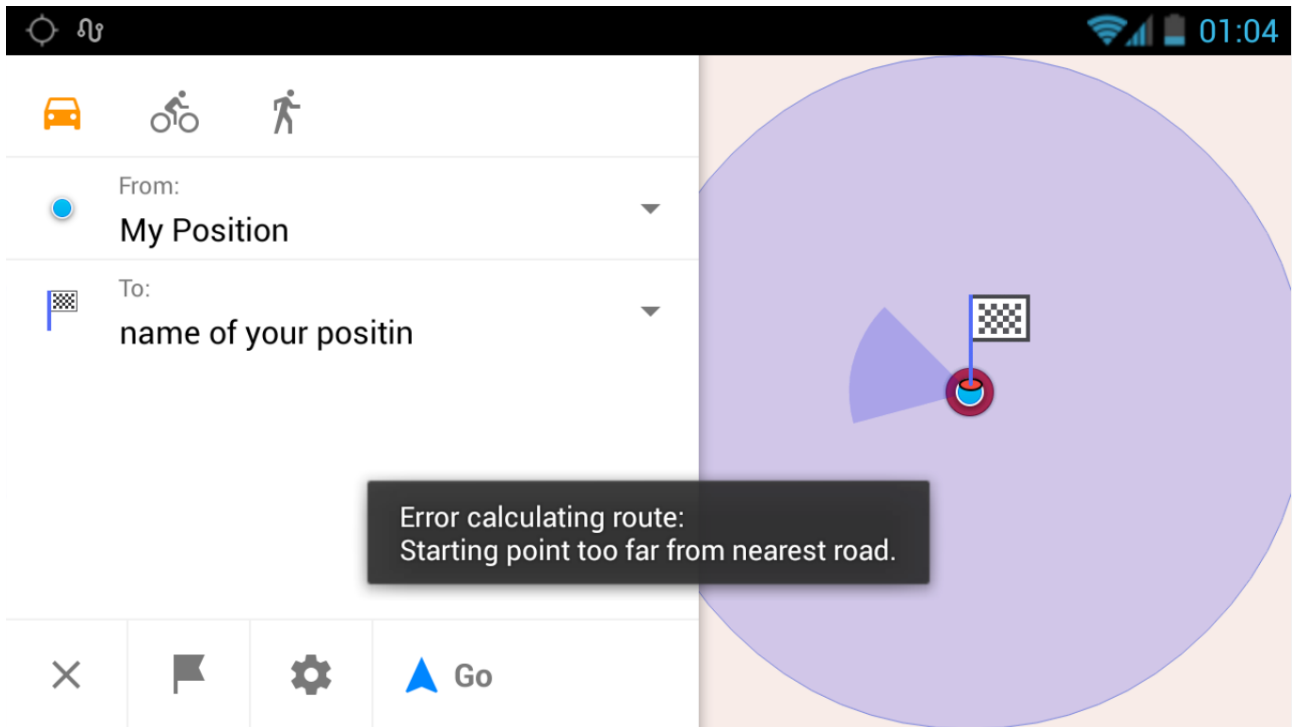

- **Turn on GPS**

START TRIP RECORDING
